78 <span style="color: darkred; font-size: 20px;">What is
    Management Information Systems?</span>
79
80 <p>Management Information Systems (MIS) is the application
    of information technology to meet organizational and
    managerial requirements that can result in business
    value. Hence, MIS students are trained to use computer
    technology to help businesses get the right information
    to the right people at the right time. In the
    undergraduate program, students learn how to collect,
    manipulate, transform, and present data to support
    organizational needs, including presentation on company
    websites. They also learn about cybersecurity and how to
    protect organizational data.</p>

```

```

81
82         <p>The Business Analytics graduate program helps students
            learn to analyze huge volumes and a variety of data,
            including those available through social media, through
            new tools and methods, such as visualization and machine
            learning, in order to generate business insights. In
            general, be it the undergraduate or graduate program,
            MIS students are trained to become business detectives
            with good analytical, business, communication, and
            problem-solving skills in a computer-based
            environment.</p>
